

Research Report: Agentic Rag

Full research summary is available in the web interface. PDF generation encountered a formatting issue.

Summary Preview: ## 1. Introduction

Agentic Retrieval-Augmented Generation (Agentic RAG) represents a significant evolution in artificial intelligence, moving beyond static information retrieval to empower large language models (LLMs) with autonomous planning and dynamic interaction capabilities. This emerging paradigm integrates AI agents into the traditional RAG pipeline, fundamentally transforming how LLMs access, process, and synthesize information from external knowledge sources. Its significance lies in e...
